

Think disruptive technologies

IMITATES LIFE

Automation in construction, maintenance and supply

Next Generation Robotics

The Power of data

Artificial Intelligence

Virtual viewings

New Realities

AI enables predictive maintenance - using online customer interactions to identify issues and solutions

AFFECTS OUR WELL-BEING

Gene Editing

The Microbiome

Digital devices connecting customers and communities, reducing isolation

Equipping homes with the basics for future i.e. Broadband and USB sockets as standard

MAKES CONNECTIONS

Internet of Pest control

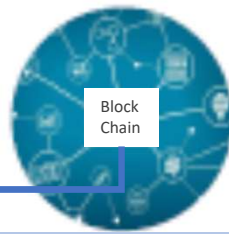

Internet Of Things

Intelligent rat traps that reduce repeat visits

Big Data

Block Chain

Systematically developing and accessing data sets that generate insight into maintenance and tenant activities for future improvement

AFFECTS HOW WE MOVE AND MAKE THINGS

Remote asset inspections

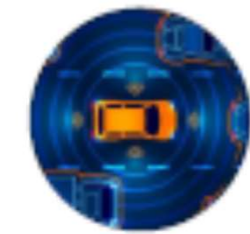

Unmanned Air Systems

Drones with high resolution cameras make condition surveys safer and easier

Circular economy - creating sustainable supply in the local economy - re-use and recycle, source local

Autonomous Road Vehicles
