Health Impact Assessment (HIA)

- HIA is a practical approach used to judge the potential health effects of a policy, programme or project on a population, particularly on vulnerable or disadvantaged groups
- Promotes greater equity in health and wellbeing
- Identifies the connections between health and other policy areas
- Increases awareness and coordinates action across sectors of how decisions may affect health and wellbeing
- Promotes evidence-based planning and transparent decision-making

Home and Agile Working in Wales: Background, Aims and Approach

- Staying at Home and Social Distancing Policy led to immediate reorientation to homeworking
- To better understand the impact of the Policy in Wales
- **Who** it affects and **how** it affects the population using the **lens of the determinants of health**

Home and Agile Working in Wales: Background, Aims and Approach

- Carried out in real-time from June to August 2020
- Wales only; comprehensive; participatory; assesses **positive / opportunities** and **negative** and **unintended negative** impacts
- Evidence: literature review, stakeholder interviews, population health profile, PHW public engagement survey data.

Population groups most affected

- Women – especially those with caring responsibilities
- Men
- Older people
- Young people and young adults
- Rural communities
- Lone parents

Key findings

- Mental health and well-being
- Benefits for employers and employees
- Increased productivity (in the short term at least)

GIG
CYMRU
NHS
WALES

Iechyd Cyhoeddus
Cymru
Public Health
Wales

Key findings

- Wide range of population groups affected
- Organisational policies are key to equality
- Access to digital infrastructure and support
- Range of wider benefits – not just work related
- Economic and environmental impacts vs. population level impacts

Opportunities

- Increased mental health and well-being
- Community development through localised services
- Young people can stay in (or return to) their communities

Opportunities

- Review sustainable economic development and spatial planning policies
- Development of new guidance and legislation for improved physical and mental health
- Improved understanding of the needs of different populations
